- **Our Mission:** To Revolutionize Beef production, through tracking, maintaining, and verifying the purity of the breed, the performance of the offspring, and the quality of the final retail product.
- **Our Vision:** To create a highly efficient business system which produces higher profits by producing consistent, and repeatable expected performance for each segment of the beef industry. This will be done by reducing the time line to make significant improvements, by monitoring and measuring each economic attribute, and providing opportunities for diversification.

We are excited to introduce this genetically pure breed of cattle to the American Cattle Producer.

We look forward to working with you!
